

Mission

**Help people to make informed decisions
and navigate the crypto landscape with
confidence**

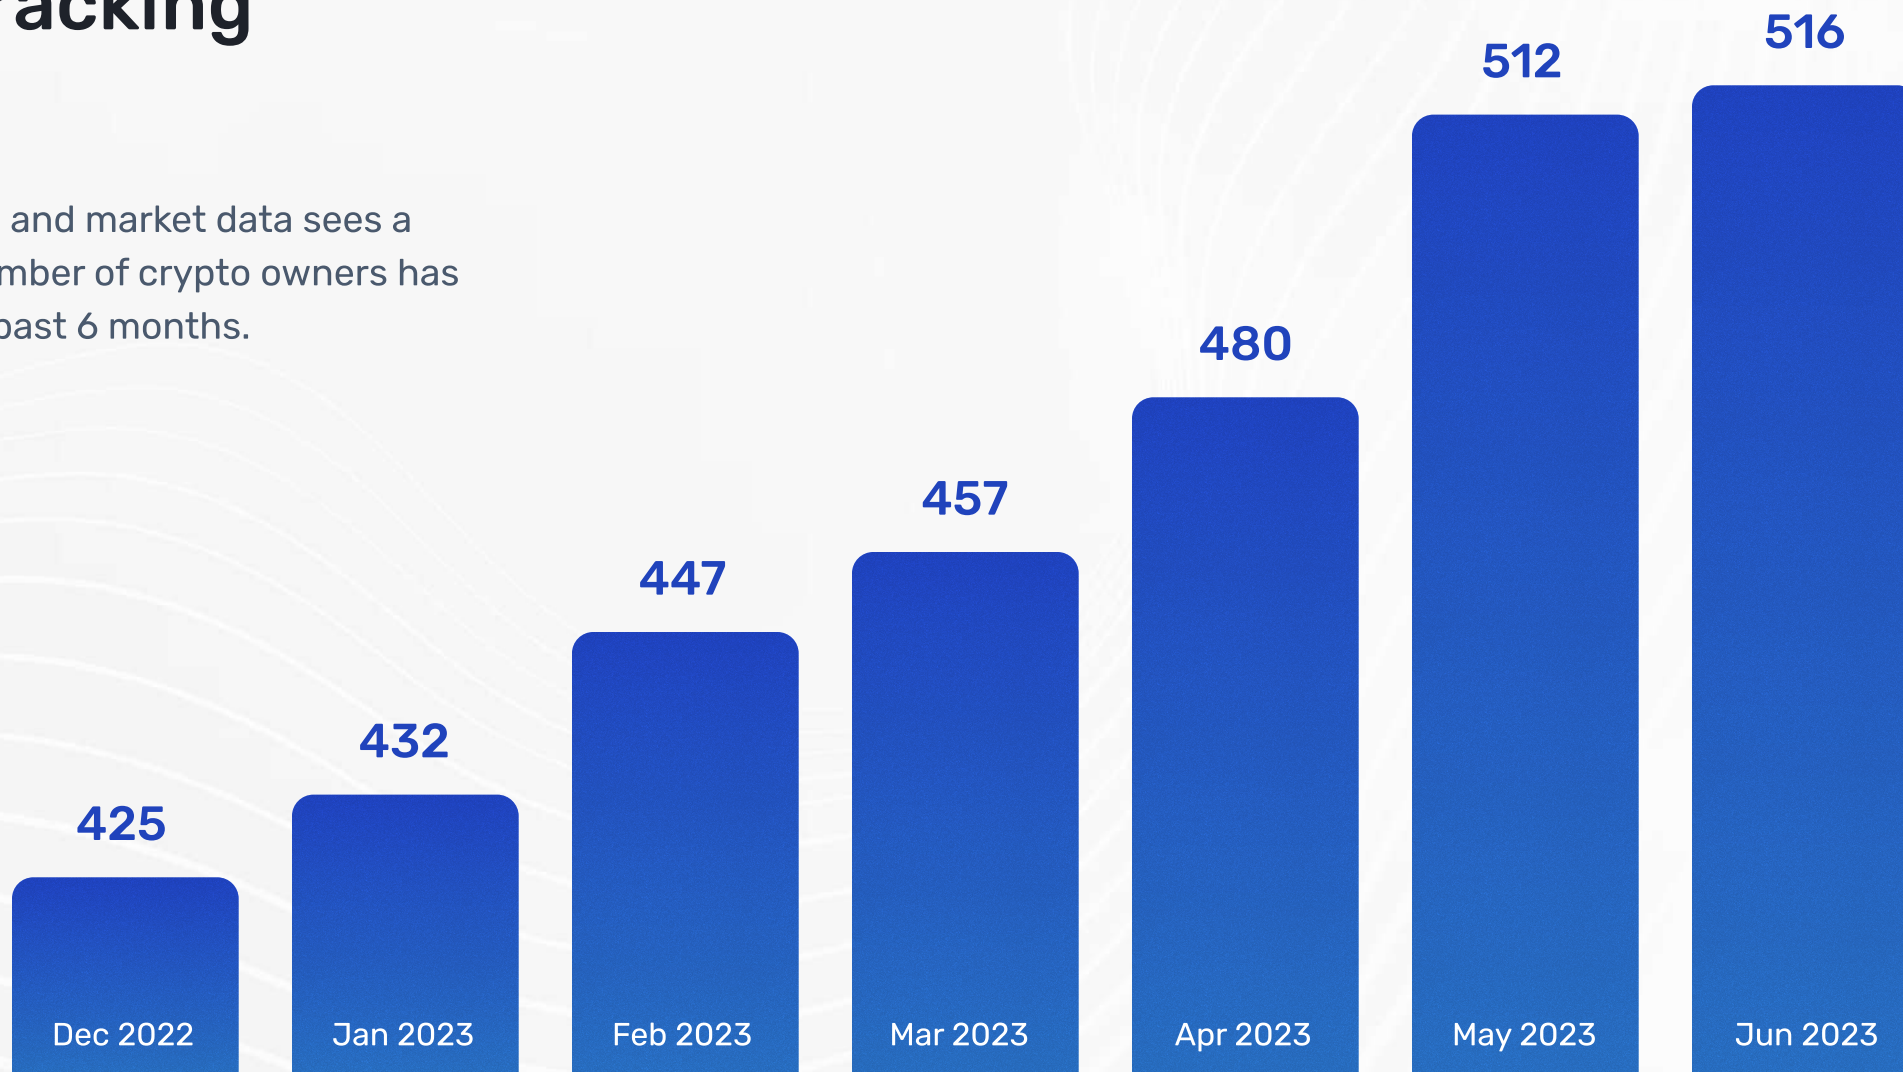

Empower people with unbiased, high-quality, and accurate cryptocurrency information at the opportune moment

Coins Rating provides AI-powered crypto tracking, portfolio management and arbitrage signals for smarter trading decisions.

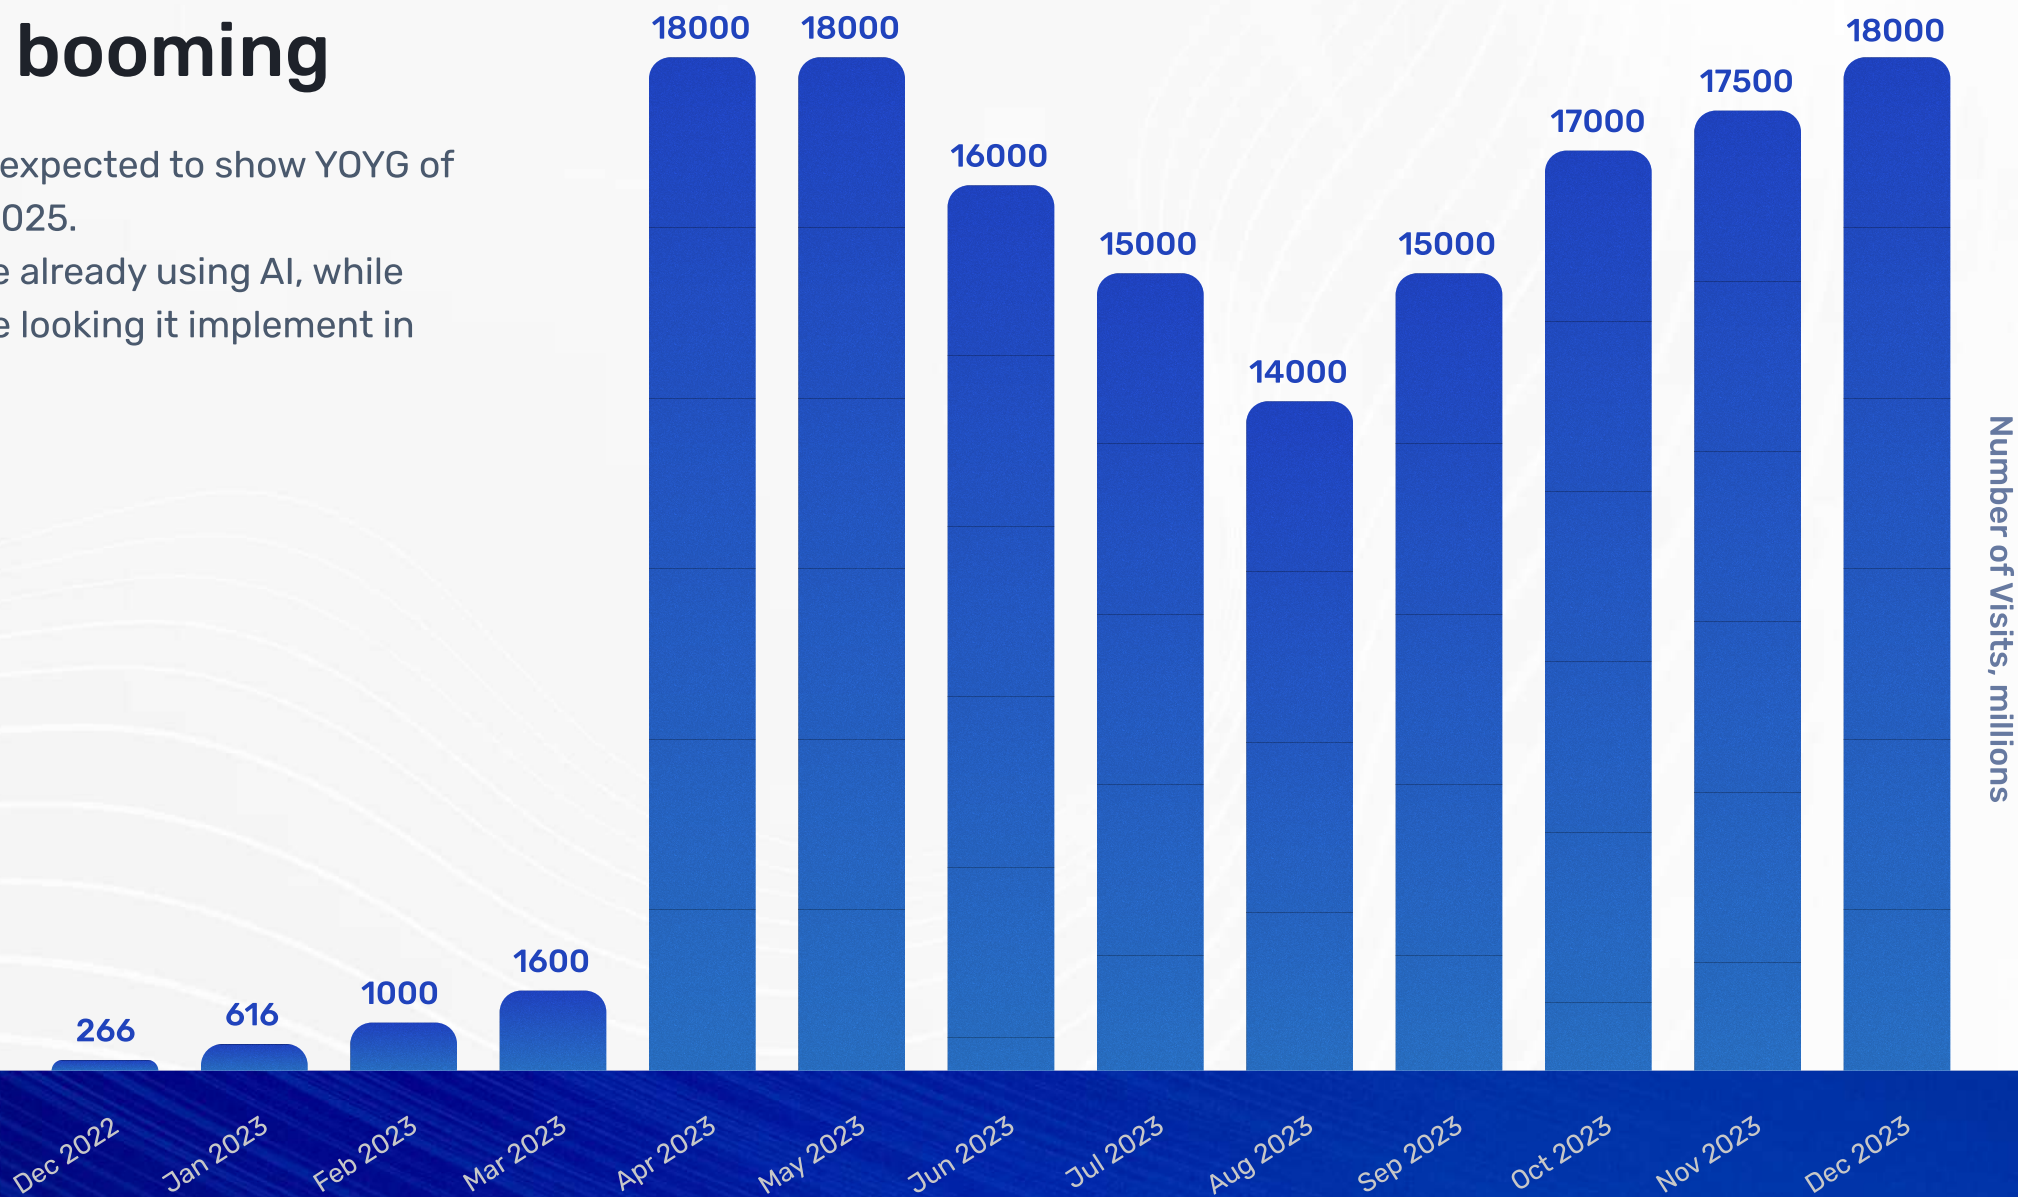

Over **50%** of crypto owners visit crypto-tracking services

The demand for crypto news and market data sees a continuous increase. The number of crypto owners has increased by 19,4% over the past 6 months.

AI market is booming

1. AI and ML industry is expected to show YOYG of 32.3% from 2023 to 2025.
2. 35% of companies are already using AI, while 42% of companies are looking it implement in the near future.

Up-to-date crypto market **data and news** **verified by AI**

AI selects and filters the news for optimal and timely decisions.

How it works

1. The system gathers the news across the internet sources and social media, filtering out duplicates.
2. AI categorizes the information to check for 'fake scores'.
3. AI categorizes the news based on positivity/negativity.
4. AI categorizes the news based on the effect on the client's open position with a recommendation of Buy/Sell or Hold.
5. The report get sent to the client in the form of notification.

Bots scan for crypto- impacting news

They search for crypto news on the Internet for 24/7

Fact checking and duplicates curation

AI executes fact or fake checks and removes duplicating data

AI-based news classification

AI classifies news on positive, neutral, negative scale

API sends news, signals to trading software

API sends news, signals to external trading software, trading bots using Websockets, FAST protocols

Notifications on web and mobile app

Push-notification informs the user about the most important news

AI assesses the impact of news on the value of the coin

AI's analytical model calculates the net effect and makes a recommendation to the client whether to Buy / Hold / Sell

One-click **AI-based** portfolio management

AI suggests a tailored portfolio and provides recommendations for its rebalancing if needed for 24/7.

How it works

1. Client specifies the portfolio parameters such as the cryptocurrencies, amount and risk preferences.
2. AI analyzes the assets and corresponding projects and generates a list of suggestions to add to the portfolio.
3. User chooses individual suggestions or adds the entire list.
4. User receives a well-balanced portfolio with regular re-balancing recommendations generated by the system.

Multi wallet support

Information about the digital assets from multiple wallets conveniently aggregated in one place on Coins Rating

AI suggests coins for the user in line with the preferences

AI-powered suggestions on portfolio composition based on the user preferences such as volume

Multiple portfolios for different investment goals

Reaching different investment goals with simultaneously tracking multiple portfolios from one convenient dashboard

AI helps to balance portfolios

AI-powered management made easier with re-balancing suggestions

Accurate information at the right time

Push-notifications about portfolio changes, bookmarked coins and projects followed

AI arbitrage signals in multiple CEX, DEXes for trading bots

AI suggests an arbitrage trade in accordance with the user's preferences.

How it works

1. The system gathers trading data from the leading DEXs and CEXs.
2. The system identifies trading pairs available for arbitrage deals and calculates the finalized profit of the deals.
3. AI suggests deals in accordance with the user preferences such as portfolio strategies, exchanges, blockchains, ROI and risk, etc.
4. The user selects individual deals or accepts the entire list.

Low latency connection to leading exchanges

Immediate access to the leading CEX and DEX order books

AI-powered search for arbitrage opportunities

Quick selection of arbitrage trading opportunities within the subscription-based service

Accurate profit calculation before deal confirmation

Accurate and timely calculation of the arbitrage trades results accounting for gas and intermediary fees before the deal

AI suggests the most suitable deals for the client

AI suggests the best arbitrage deals for the user based on the preferences such as the volume, blockchains, exchanges, ROI, etc

Omni-channel arbitrage signals on the go

Arbitrage deal signals straight to the website, Telegram or trading platform of the user

Clean visualization of complex deals

Coherent visualization of complex chains of arbitrage deals within one easy-to-use UI

FAST protocol for trading data exchange

Using the world's cutting-edge standards for fast trading data transfers

Trading instructions made simple with ChatGPT

Creating of arbitrage trading scripts written in regular language without the need for coding skills or complex set-ups

Partnership with developers of trading software

Seamless integration with trading software for deal execution with minimal latency

AI-based non-biased cryptocurrency exchanges ranking

AI takes into consideration various parameters for ranking: Liquidity, Web Traffic, Trading Volume (filtered and normalized), Order Book Spread, Market Activity, Bug Bounty, Cyber Security, Team Publicity, Incidents, Proof of Reserves, Regulatory Compliance, Customer Support Metrics, User Satisfaction Surveys, Security Measures, and more.

Non-biased transparency

AI is immune to human imperfections, like prejudice, favoritism and corruption, thus it ensures that the ranking of cryptocurrency exchanges is fair, transparent and objective.

Real-time accuracy

AI provides live and accurate ranking of cryptocurrency exchanges, taking into account large amounts of data, while identifying the patterns that humans may miss. As a result investors make more informed decisions.

White-label solutions

Provide customers with AI-powered crypto exchange ranking feature without developing own infrastructure.

Roadmap

2024

Q2

- Token page update
- CRT private sale start
- Multi wallet connection
- AI-based non-biased crypto exchanges ranking
- CEXs and DEXs API connection
- [Lock CRT for benefits](#)

Q3

- Smart contract launch
- Coins Rating IDO
- Add token unlock schedule
- API for cryptocurrency overview provided by AI
- API update with AI features (white label)
- [Purchase subscriptions in CRT](#)

Q4

- AI-based news
- AI-powered portfolio suggestion
- AI-based trading signals and notifications
- Creation of custom indexes in regular language with AI
- API update with AI features (white label)

2025

Q1

- AI-based portfolio re-balancing
- AI Arbitrage signals
- API update with AI features (white label)
- [Coins Rating's ecosystem loyalty program update](#)
